# FINAL PROJECT REPORT

## Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

## 1. Introduction

This project implements an automated workflow for standard laptop procurement using ServiceNow Flow Designer. The project addresses inefficiencies in the existing procurement process, where standard laptop requests require a configuration step that may be overlooked or delayed. The proposed workflow connects the Service Catalog request, approval process, Flow Designer automation, and Catalog Task creation.

## 2. Problem Statement

The current IT procurement process lacks efficiency and automation, resulting in delays and manual overhead, particularly in handling standard laptop orders. Requests for standard laptops often require configuration, but this step is prone to oversight or delay, leading to frustration among users and inefficient resource allocation within the IT department.

## 3. User Story

As a member of the IT procurement team, I want a streamlined process for ordering standard laptops so that tasks are automatically generated and assigned to the hardware team for configuration. This will ensure that laptops are promptly configured upon arrival, reducing user wait times and minimising manual intervention.

## 4. Project Objectives

- Create a seamless experience for users requesting standard laptops by ensuring timely configuration.
- Reduce manual intervention and potential errors in the procurement process.
- Improve resource utilisation within the IT department by optimising task allocation.
- Enhance overall efficiency and productivity in IT procurement operations.

## 5. Project Implementation – Milestone 1: Flow

The first milestone creates the Flow Designer automation. The project instructs the user to open ServiceNow, navigate to Flow Designer under Process Automation, create a new Flow, and configure the Flow properties.

- Flow Name: Standard laptop task.
- Application: Global.
- Run User: System User.
- Trigger: Service Catalog.
- Action: Create Catalog Task.
- Requested Item Record is supplied as the Request item.
- Short description and description: Laptop need to Configured.
- Assignment group: Hardware.
- Approval: Approved.
- Save and activate the flow.

**TASK INITIATION**

**Milestone 1 : Flow**

**Activity 1: Create a Flow to Create Catalog task to update the short description after Approval the service Request and it will be Assignment group to Hardware.**

1. Open service now.
2. Click on All >> search for Flow Designer
3. Click on Flow Designer under Process Automation.
4. After opening Flow Designer Click on new and select Flow.
5. Under Flow properties Give Flow Name as " Standard laptop task".
6. Application should be Global.
7. Select Run user as " System user " from that choice.
8. Click on Submit.

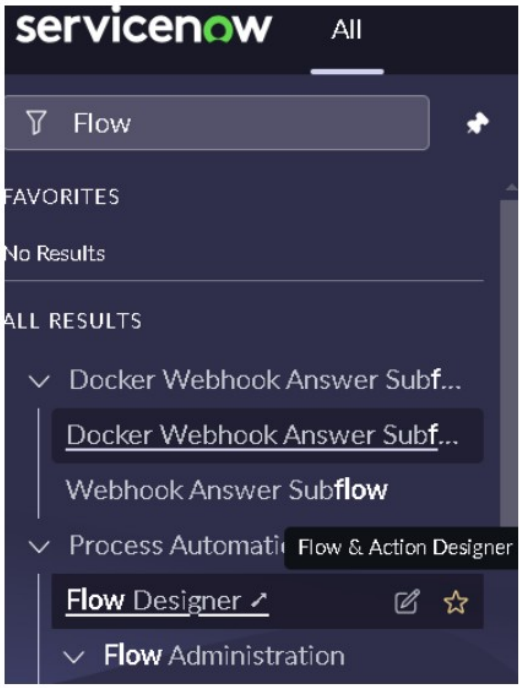

*Figure: Flow properties and initial configuration*

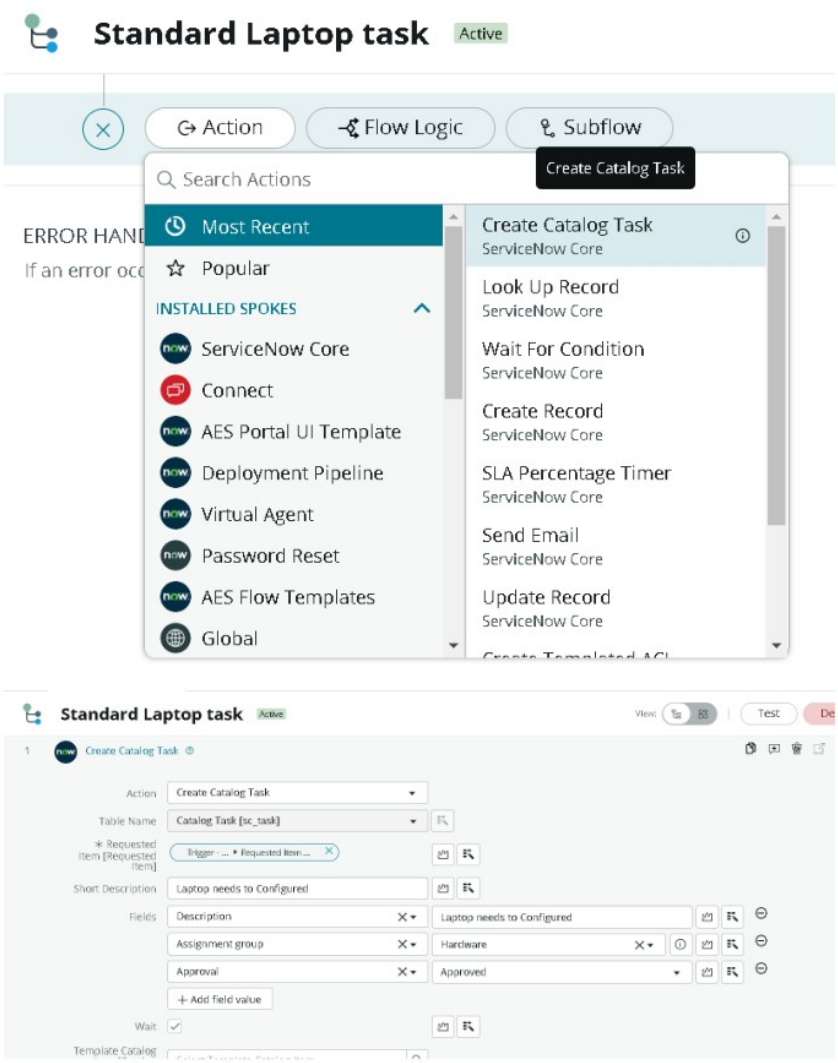

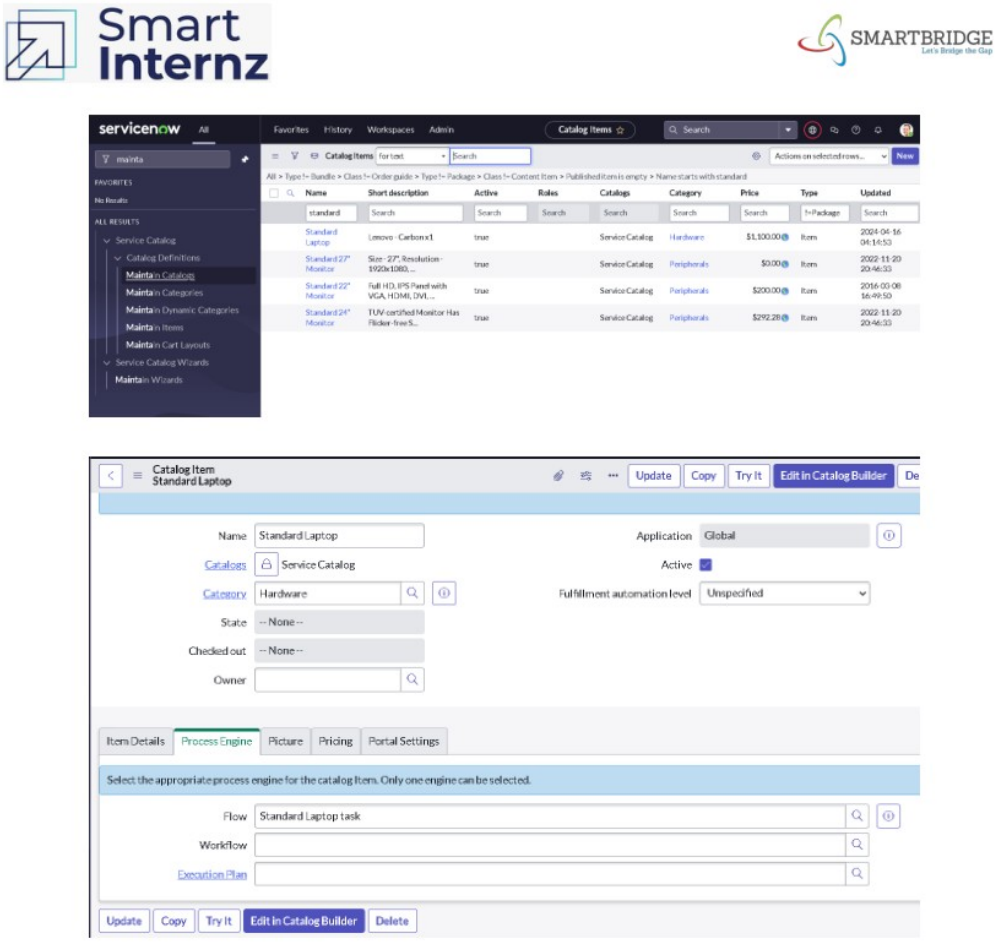

*Figure: Create Catalog Task configuration*

# 6. Milestone 2: Flow Assignment

The second milestone connects the completed Flow Designer flow to the Standard Laptop Service Catalog item. The project directs the user to Maintain Items, search for Standard Laptop, open the Process Engine section, remove the remaining automations where required, add Flow, select the Standard Laptop Task flow, and save the record.

**Milestone 3 : Service Catalog**

**Activity 1: Service Catalog for placing order and get Approval**

1. Click on All >> Search for " Service Catalog ".
2. Click on Service Catalog >> click on Hardware.
3. Scroll a bit to find the " Standard Laptop " click on that.
4. After that click on " Order Now " to place the request.

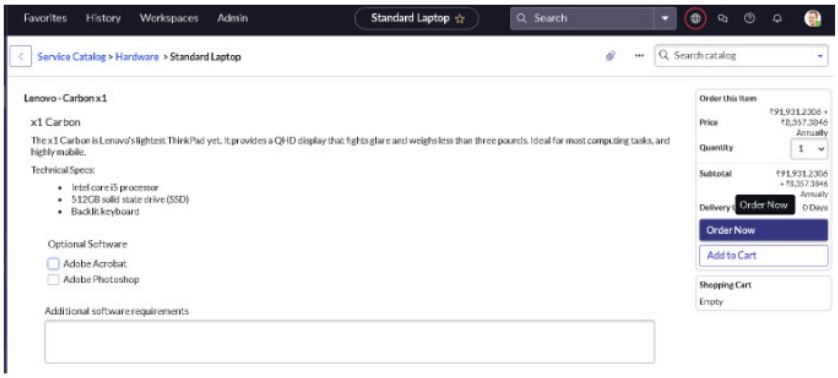

*Figure: Process Engine flow assignment*

# 7. Milestone 3: Service Catalog

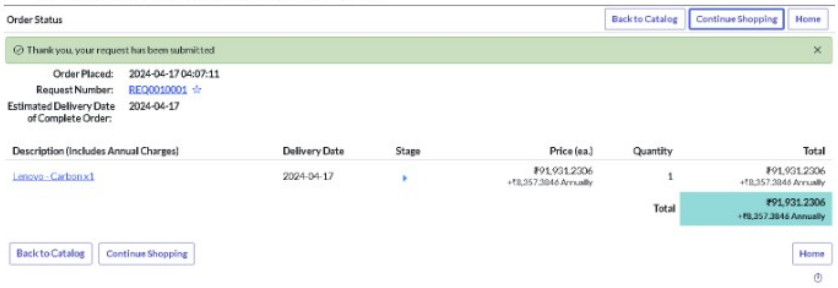

The third milestone demonstrates the actual procurement process. The user opens Service Catalog, selects

Hardware, chooses Standard Laptop, and clicks Order Now. The resulting Order Status page provides access to the Request Number and the Requested Item.

5. Now we will see the Order status
6. In that click on the Request Number

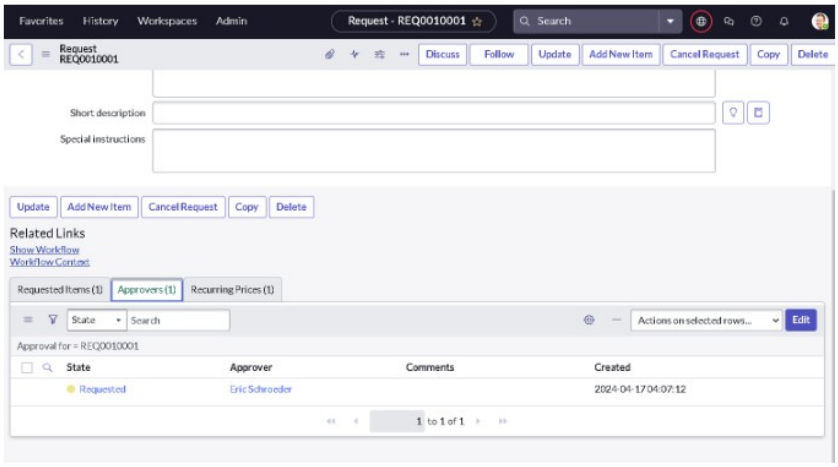

7. It will open the Requested number record.
8. Scroll down Click on the Approvers Section.

*Figure: Standard Laptop order and order status*

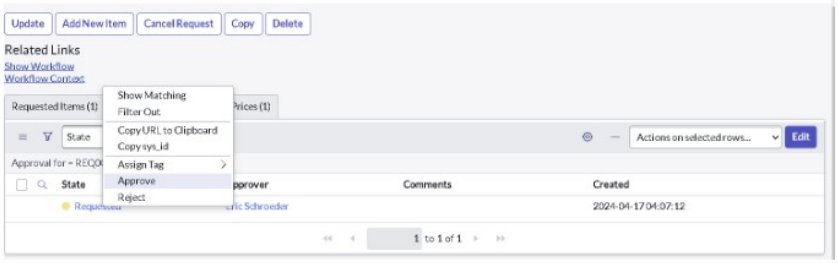

# 8. Approval and Catalog Task Verification

After the order is submitted, the project instructs the user to open the Request Number, scroll to the Approvers section, and approve the request. The Requested Item section is then opened and the Catalog Tasks section is inspected to verify the generated task, its short description, and assigned group.

9. Right Click on the Record to see config in that Click on the Approve.

10. Then click on the Requested item Section
11. Open that Requested Item record

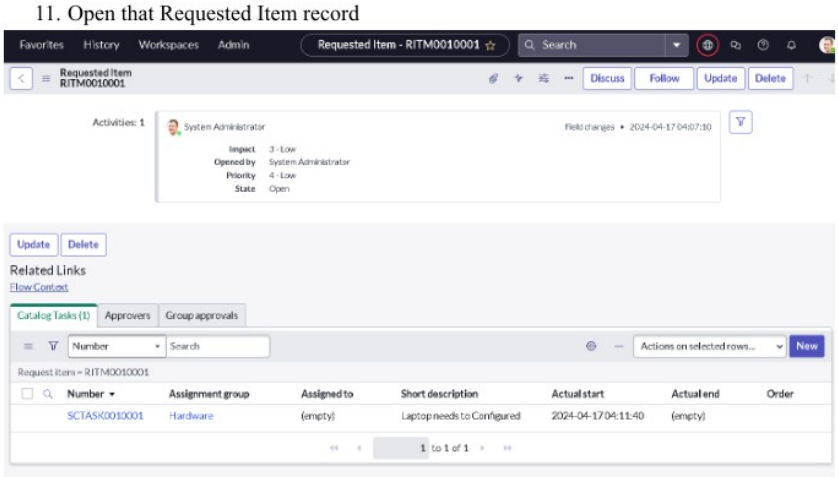

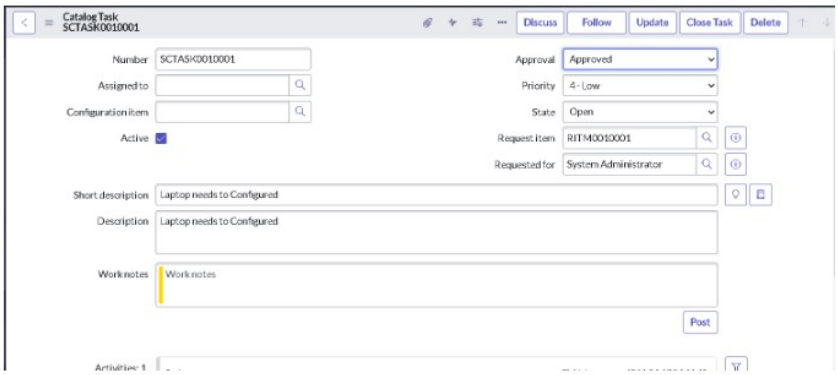

*Figure: Approval, Requested Item, and Catalog Task verification*

12. Scroll down to the " Catalog tasks " Section
13. Open the record to see the updated status of the record with Short description and Assigned group.

**Conclusion :**

By automating the standard laptop procurement process with ServiceNow's Flow Designer, the project effectively addresses inefficiencies and reduces manual overhead. This streamlined workflow ensures timely configuration of laptops, minimizes user wait times, and enhances overall productivity within the IT department. The implementation of this automated solution not only optimizes resource allocation but also significantly improves the user experience by providing a seamless and efficient procurement process.

## 9. Expected Result

The expected result is an automated transition from a Standard Laptop request to an approved configuration task assigned to Hardware. The workflow reduces manual task creation, supports timely laptop configuration, and improves resource allocation within the IT procurement process.

## 10. Conclusion

By automating the standard laptop procurement process with ServiceNow Flow Designer, the project addresses the inefficiencies and manual overhead described in the problem statement. The workflow connects Service Catalog ordering, approval, task creation, and Hardware assignment into a streamlined process. The source project concludes that this approach supports timely configuration, minimises user wait times, and enhances productivity and the user experience.

## 11. Project Workflow Summary

- Standard Laptop selected from Service Catalog.
- Order is submitted and the request status is displayed.
- Request Number is opened and the Approvers section is accessed.
- Request is approved.
- Requested Item is opened.
- Catalog Task is generated.
- Generated task shows the configured short description and Hardware assignment.
