TEAM ROLES AND RESPONSIBILITIES

Auto Ticket Classification using Flow Designer

The project team is organized with one Project Leader and four Team Members. The team works collaboratively to plan, configure, test, document, and demonstrate the Auto Ticket Classification using Flow Designer project. Each member has a defined responsibility while contributing to the overall success of the project.

1. Aswini K – Project Leader

Aswini K serves as the Project Leader and coordinates the overall project activities. The Project Leader is responsible for planning the work, assigning tasks among the team members, monitoring progress, and ensuring that the project activities are completed in an organized manner. Aswini K coordinates the implementation of the Flow Designer solution and helps ensure that the ticket-classification workflow is developed according to the project requirements. The Project Leader also coordinates testing activities, reviews the work completed by the team, and ensures that required documentation and project evidence are prepared. The Project Leader provides overall coordination between implementation, testing, documentation, and demonstration activities and oversees the final submission of the project.

2. Jebisha R – Team Member

Jebisha R serves as a Team Member and supports the implementation of the project. The responsibilities include assisting with ServiceNow configuration and Flow Designer activities. Jebisha R supports the development of the incident workflow and helps verify that the classification process works as intended. The member can assist with checking workflow conditions, reviewing ticket information, supporting configuration activities, and helping with testing. Jebisha R also contributes to project documentation by recording relevant implementation details and supporting the preparation of evidence required for the project report and demonstration.

3. Aathif A – Team Member

Aathif A serves as a Team Member with responsibilities related to configuration, workflow development, validation, and testing. Aathif A supports the team in checking the Flow Designer process and validating the conditions used for ticket classification. The member assists in verifying that incidents are processed correctly and that the expected classification information is produced. Aathif A also supports testing activities by checking different ticket scenarios and reporting any issues identified during validation. The member contributes to documentation and evidence collection so that the completed project activities can be clearly presented in the final project materials.

TEAM ROLES AND RESPONSIBILITIES – CONTINUED

4. Sree Hari Priya S P – Team Member

Sree Hari Priya S P serves as a Team Member and supports testing, documentation, and project evidence activities. The member helps prepare and review test scenarios for the automated ticket-classification workflow. Sree Hari Priya S P assists in checking whether the system produces the expected results for different incident inputs. The member also supports the collection and organization of screenshots, test evidence, and other project materials. In addition, the member contributes to preparing the project report and demonstration materials and helps review the documentation for completeness and consistency.

5. Rishinkan H – Team Member

Rishinkan H serves as a Team Member and supports validation, testing, documentation, and final project preparation. The member assists in reviewing the results of the ticket-classification workflow and helps confirm that the implemented process operates consistently. Rishinkan H supports the preparation of testing evidence and project documentation and assists the team in organizing material required for the final report and demonstration. The member also contributes to reviewing completed activities and communicating observations to the Project Leader so that required improvements can be addressed before final submission.

6. Team Mechanism of Working

The team follows a collaborative and leader-led working mechanism. The Project Leader coordinates the activities and monitors completion, while the four Team Members contribute to implementation, testing, validation, documentation, and evidence preparation. Team members communicate their progress and observations to the Project Leader. Issues identified during testing or review are discussed and addressed collaboratively. This approach helps the team maintain consistency between the project design, Flow Designer implementation, testing results, and final documentation.

7. Coordination and Contribution

Each team member contributes to the project according to the assigned role. The Project Leader provides overall direction and final review. Jebisha R and Aathif A provide support for implementation and configuration activities. Sree Hari Priya S P and Rishinkan H provide support for testing, validation, documentation, and project evidence. The members also support one another when reviewing configuration results, preparing screenshots, checking test outcomes, and organizing the final project materials.

8. Expected Team Outcome

The expected outcome is a completed Auto Ticket Classification using Flow Designer project supported by proper configuration, testing, documentation, and demonstration evidence. The team aims to ensure that the implemented workflow operates consistently and that the project activities are clearly documented. Through coordinated work, the team members contribute to successful project completion while the Project Leader maintains overall coordination and final quality review.
